1 Introduction

L26 GNSS module can use GLONASS, Galileo and GPS constellations and features accurate acquisition. The module supports autonomous GNSS C/A, SBAS function (including WAAS and EGNOS) and AGPS (EASY™ function). It can be used in the positioning, navigation and other industries.

This document describes the software aspects of L26. L26 supports NMEA 0183 standard commands. MTK NMEA extended packet is supported to control and configure L26 GNSS module.

Please note that L26NR02A01S version uses NMEA V4.10. It will change the format of RMC, GSA and GSV sentences.

2 Standard NMEA Packet Protocol

L26 supports NMEA 0183 standard messages. The following table shows the structure of a NMEA 0183 standard message.

3 MTK NMEA Packet Protocol

This chapter introduces the MTK NMEA packet protocol, which is a set of extension messages of the standard NMEA packet protocol. These messages are used to control and configure L26 GNSS module. The following table shows the structure of a MTK NMEA packet.

Table 2: Structure of MTK NMEA Packet

*	End character of data field
Checksum	Hexadecimal checksum
<CR><LF>	Each NMEA message ends with ‘CR’ and ‘LF’

3.3. Packet Type: 001 PMTK_ACK

Acknowledgement of PMTK command. In order to inform the sender whether the receiver has received the packet, an acknowledge packet PMTK_ACK should be returned after the receiver receives a packet.

Some commands will cause the GNSS module to restart or change the baud rate. There is no PMTK_ACK for those commands listed below:

- PMTK_CMD_HOT_START
- PMTK_CMD_WARM_START
- PMTK_CMD_COLD_START
- PMTK_CMD_FULL_COLD_START
- PMTK_SET_NMEA_BAUDRATE

Example: $PMTK001,869,3*37<CR><LF>

*	End character of data field
Checksum	Hexadecimal checksum
<CR><LF>	Each NMEA message ends with 'CR' and 'LF'

3.4. Packet Type: 101 PMTK_CMD_HOT_START

This message is used to perform hot start on GNSS module (use all available data in the NV store). Normally hot start means the GNSS module was powered down less than 3 hours (RTC must be alive) and its ephemeris is still valid. As there is no need for downloading ephemeris, it's the fastest startup method.

Example: $PMTK101*32<CR><LF>	
Field	**Description**

$	Each NMEA message starts with ‘$’
PMTK	MTK proprietary message
Packet Type	101
*	End character of data field

<CR><LF>	Each NMEA message ends with ‘CR’ and ‘LF’

3.5. Packet Type: 102 PMTK_CMD_WARM_START

This message is used to perform warm start on GNSS module. Warm start means the GNSS module has approximate information of time, position and coarse data on satellite positions. But it needs to download ephemeris until it can get a fix. Using this message will force a warm restart on the GNSS module without using the ephemeris data in NV.

Example: $PMTK102*31<CR><LF>	
Field	**Description**
$	Each NMEA message starts with ‘$’
PMTK	MTK proprietary message
Packet Type	102

<CR><LF>	Each NMEA message ends with ‘CR’ and ‘LF’

3.6. Packet Type: 103 PMTK_CMD_COLD_START

This message is used to perform cold start on GNSS module. Using this message will force a cold restart on GNSS module without using any prior location information, including time, position, almanacs and ephemeris data.

Example: $PMTK103*30<CR><LF>	
Field	**Description**
$	Each NMEA message starts with '$'
PMTK	MTK proprietary message
Packet Type	103
*	End character of data field
Checksum	Hexadecimal checksum
<CR><LF>	Each NMEA message ends with 'CR' and 'LF'

3.7. Packet Type: 104 PMTK_CMD_FULL_COLD_START

This message is essentially a cold restart, but additionally clear system and user configurations at re-start. That is, reset the GNSS module to the factory status. Full cold start means the GNSS module has no information on last location. It needs to search the full time and frequency space, and also all possible satellite numbers before it can get a fix.

Example: $PMTK104*37<CR><LF>	
Field	**Description**
$	Each NMEA message starts with '$'
PMTK	MTK proprietary message
Packet Type	104
*	End character of data field
